IMPORTANT AND INTERESTING FACTS YOU SHOULD KNOW ABOUT

CROSMAN CO_2 and Air Powered Rifles and Pistols . . . Ammunition, Targets and Accessories

Millions of Crosman CO_2 powered and air powered guns are now in use throughout Canada and the United States and other countries of the world. Sales of Crosman rifles and pistols continue to increase at a remarkable rate.

What is the answer to this modern success story in guns? Basically the answer is to be found in the CROSMAN SHOOTING SYSTEM itself. This system offers the desirable combination of *"Controlled Range and Power" plus accuracy* to meet the requirements and restrictions of modern-day shooting. The very nature of the system provides shooting fun and training which can be enjoyed all year 'round.

Crosman CO_2 powered guns, air guns, ammunition, targets and accessories are all part of the Crosman Shooting System which has won fame among amateur and professional shooters everywhere.

Let's consider all the advantages offered by Crosman CO_2 and air powered guns — then some of their basic differences. This information is helpful when you discuss Crosman guns with Customers.

ADVANTAGES

1. The Crosman CO_2 or air propelling action, combined with the light weight of specially designed ammunition, controls range and power so that the gun may be used without long range danger and prohibitive shooting restrictions. At the same time, accuracy is excellent. All Crosman Pellguns® have button-rifled barrels. They will shoot target groups at 25 feet equal in accuracy to those of many high-grade firearms.

2. FOR OUTDOOR SHOOTING, *Crosman "Controlled Range and Power" with accuracy* provides year 'round serious training as well as fun for all shooters. Minimum range space is required. Shooting facilities can be set up quickly and inexpensively — close by. There's no need to drive for miles to find "room" for shooting. Maximum range is approximately 300 feet.

Crosman CO_2 and air powered guns provide the answer to the growing restrictions of urban and suburban living. Safe, convenient properly supervised facilities can be set up in recreational areas. In many localities, Crosman "Controlled Range and Power" make it possible for a person to target-shoot right in his own backyard. Crosman guns are also ideal for shooting rodents and small game.

3. FOR INDOOR SHOOTING. Here again, no elaborate facilities are needed to set up a range for Crosman Shooting. Cellar game rooms, club rooms, factory recreation rooms, auditoriums — a suitable place for indoors Crosman shooting can be found just about anywhere.

A Crosman CO_2 or air powered gun, a supply of Crosman ammunition, a few inexpensive Crosman targets and accessories, plus a simple backstop (½" plywood will suffice), are all you need for safe, satisfying, *approved regulation* shooting. In contrast to the more stationary, permanent-type range equipment required by powder-cartridge firearms, Crosman range equipment is lightweight and mobile — it can be moved from place to place with utmost ease and convenience.

It is this high degree of flexibility in the Crosman System that shooters like. There are few limitations on where a range can be set up. Your gun and target equipment can be moved to any location — to the recreation rooms of friends, relatives or fellow employees. More gun clubs can also be organized in an area, providing more frequent competitive matches and fun.

4. Crosman CO_2 and air powered guns are smokeless, odorless and clean. Gun bores remain clean with minimum maintenance.

5. The firing of a Crosman gun is practically silent compared to the noise level of other types of guns. This is an important consideration in both indoors and outdoors shooting.

6. In comparison to powder-cartridge firearms of equivalent quality, Crosman rifles and pistols are considerably lower in price. They are within the means of nearly all gun customers.

7. Shooting with a Crosman gun costs less, too. For example, Crosman Pellguns can be used for as little as half a cent a shot!

8. Marksmanship training is more fun, progresses faster. Beginner and expert alike get more practice at less cost, are better able to concentrate on *shooting fundamentals.*

These are the important advantages of the Crosman Shooting System. Now let's consider some of the major differences between CO_2 and air powered guns.

The choice between a Crosman CO_2 powered gun and a Crosman air powered gun is generally a matter of personal preference. However, it will help you to know a few facts about the operation of each type.

The CO_2 powered gun is a rifle or pistol which uses carbon dioxide (CO_2) for propelling small-caliber precision pellets or B·Bs. The CO_2 is safely sealed in a patented Crosman cartridge called the Powerlet.®

The CO_2 requires no pumping; thus shooting is faster, even in single shot action. Rapid fire is possible with Crosman CO_2 repeaters. In fact, the Crosman model 600 semi-automatic pistol is capable of firing 10 shots in 3 seconds! Crosman CO_2 guns include a broad range of rifle and pistol models to meet the requirements of all shooters.

Crosman air powered guns are of two types: The pneumatic or pump-up system and the spring-air compression system. The *spring-air gun* operates by a piston compressing a steel spring by manual action. Only the compressed air acts as a propellent. In the *pump-up gun,* power is supplied from a reservoir of compressed air released when the trigger is pulled. Much higher velocities are possible with the pump-up system.

Be sure to read the instruction manual that comes with each Crosman rifle and pistol. It will be a great aid to you in discussing and selling Crosman CO_2 and air powered guns.

Ammunition is an essential and vital part of the Crosman Shooting System. Crosman ammo, both pellet and B·B, has been perfected over the years by gun and range experts. It is scientifically designed for utmost safety and greatest accuracy in limited area shooting.

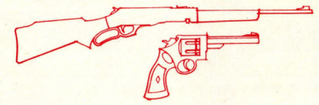
CROSMAN SUPER PELL® PELLETS are used in Crosman CO_2 and air-powered Pellguns. Made of virgin lead, they safely flatten on impact. There is no shattering, no serious ricocheting. Super Pells are designed with a hollow skirt that conforms to the barrel rifling to assure top performance. This ammunition is capable of extreme precision shooting in the ranges of Crosman CO_2 or air powered rifles and pistols.

CROSMAN SUPER B·Bs® are copper coated steel balls. They are precision ground — made perfectly round to assure straighter shooting. Super B·Bs are used in Crosman and all other makes of B·B guns. The Crosman Arms Company has the most modern B·B producing equipment in existence.

CROSMAN CO_2 CARTRIDGES — the famous Crosman *Golden Powerlets* — provide the "go power" behind the easy, rapid shooting of Crosman CO_2 rifles and pistols. An exclusive patented cap seal pierces clean for firing.

The Crosman Shooting System also includes targets for amateur shooting and electric turning targets for professional training. NRA-approved pistol and rifle targets, International rapid-fire and slow-fire, silhouette, as well as specialty targets are to be found in the complete Crosman line.

The ultimate in training devices is offered exclusively by Crosman Arms Company. *This is the Crosman Moving Picture Combat Target System* now used by many law enforcement agencies throughout Canada and the United States. This electronically operated system, bringing life-like realism into training action, is a major break through in the development of good shooting judgment and accuracy in police and military training.



IN CONCLUSION —

Crosman Arms Company is the world's largest manufacturer of CO_2 powered guns. Crosman pioneering and *constant product development* in air guns as well as CO_2 guns have opened up whole new fields of shooting fun and serious gun training for millions of Canadians and Americans.

It is significant to note that hundreds of shooting clubs, youth groups, community organizations and schools have taken up marksmanship training and competition using the *complete* Crosman Shooting System.

The National Rifle Association of America has established official courses for CO_2 Pellet and B·B shooting. Crosman CO_2 rifles and pistols are used for official training by Federal, State, and Municipal law enforcement groups. Crosman Pellguns and equipment are an official part of the U.S. Air Force Marksmanship Training Program.

To the world's gun experts as well as the shooting public, Crosman pledges to uphold its reputation for quality products, dependable service, sound value and the unending research and development synonymous with *perfection.*
